My gardens, during the season of bloom, are my best advertisement and I invite all who are interested in flowers to come and see the Iris, Peonies and Phlox when in bloom. Those within a reasonable distance will be notified as usual. The Iris in full bloom is a sight you will never forget.

This should be the most interesting season for Iris that I have ever had. Many seedlings of both Bearded and Japanese varieties will bloom for the first time. These are the result of hand pollenizing, and I used only the finest varieties in making the crossings.

After the gardens, this catalogue is my only salesman. If you are not interested, will you be kind enough to hand it to some neighbor who may be.

No charge is made for packing, and shipping charges are prepaid on orders of \$3.00 or over. Delivery by auto free of charge is usually made in Bellows Falls, Brattleboro, Springfield, Vt., in Keene and Claremont, N. H., and in Greenfield, Mass. Large orders are delivered anywhere within a reasonable distance.

My only guarantee is that plants are shipped in good condition and are true to name. Any stock proving untrue to name will be replaced without further expense to the customer. I assume no other responsibility for results after the plants have left my care.

All plants are freshly dug, and nothing is shipped that I have not first inspected. Great care is taken to insure that only strong, healthy stock is sent out.

LANDSCAPE WORK

The planning of gardens, large or small, planting and landscape work for the home grounds is part of my business.

I have visited many of the beautiful gardens of England, France, Italy and of this country. With years of experience I am qualified to help in any of your problems of garden or grounds.

PRACTICAL GARDEN WORK

Your garden or perennial border may be overcrowded and root bound and you are not getting the results that you should. Let us make it over for you. We divide and reset the perennials, fertilize, resoil it if necessary, and rearrange the plants for better effect. All this may be done at moderate cost. Estimates will be gladly given.

Ten per cent discount will be allowed on all orders, accompanied by the cash, received before April 15th. Oriental Poppies ordered at this time cannot be shipped until late August and Peonies not before September 10th. Spring shipment can be made on everything else in the catalogue.

PEONIES

Single, Double and Japanese

The most important factor in success with Peonies is the quality of the stock that is planted. Much disappointment results from planting and trying to nurse along Peonies taken from roots too old to stand dividing.

The plants I send out are strong, three to five eye divisions, cut from vigorous, young stock. If planted and cared for according to the directions sent with the roots, they should give some bloom the following season.

The shipping season begins September 10th and continues until freezing weather. Early planting is advised. I will attend to planting any order of ten dollars or more within twenty-five miles of Putney.

There are no poor varieties in my list and the average of the ratings is very high. Many of the world's finest are included.

Prices are as low as is consistent with vigorous, young, well-grown stock.

JAPANESE IRIS

We have no more beautiful perennial than the Japanese Iris. The period of bloom is July 4th to the 25th and the gorgeous flowers, sometimes eight or ten inches across, make a wonderful display.

Cultural directions are few and simple. Good mellow soil, sunshine and plenty of water during June. Any manure is good fertilizer, but positively no lime or bone meal should be used. Give protection, of some coarse material, the first winter to prevent heaving by the frost. After that no protection is needed.

Prices are for larger divisions than are usually sent out by nurseries. The shipping season begins August 15th.

HEMEROCALLIS—YELLOW DAY LILY

Too much emphasis cannot be put on the garden value of the new *Hemerocallis*. They offer a splendid field for the Hybridizers and the result of their efforts is that the Yellow Day Lily may now be had in bloom from May to September.

A single variety will bloom over a long period and on well established plants, one blossoming stalk will produce one or more flowers a day for about three weeks.

Late July and August is a good time to see many of them in bloom.

CITRINA. Large pale yellow. Fragrant. August.	\$.35
